Jun Ho Jeon

437-972-7845 | Toronto, ON | Junhojeon88@gmail.com | LinkedIn | Website

Summary

Full-Stack Developer with expertise in modern web and mobile frameworks (TypeScript, React, Flutter) and AI-driven automation. Experienced in engineering intelligent pipelines, agentic workflows, and secure, responsive applications.

Experience

Full Stack Developer / Designer Feb 2026 – June 2026
Café Princess *Toronto, ON*

- **Modernized the customer ordering experience** by developing a responsive digital storefront with React 18, TypeScript and Tailwind, successfully replacing physical menus.
- **Cut menu update times by 80%** by building a secure Supabase admin portal that granted staff comprehensive CRUD control.
- **Ensured 100% uptime and uninterrupted customer access** by engineering a zero-downtime static fallback with a single-flag failover.
- **Reduced storage footprint by 90%** and remained under a 5GB egress budget by implementing WebP compression and custom Node.js automation scripts.

Freelance Mobile Application Developer Jun 2025 – July 2025
Sunjin School *Gyeonggi-do, KR*

- **Improved independent task completion by 60%** for students with disabilities by designing and implementing highly accessible UI/UX features.
- **Boosted student learning engagement by an estimated 40%** by developing a highly interactive Flutter (Dart) mobile application.

Projects

AI-Powered Job Finder | *TypeScript, React, Node.js, OpenAI API, Zod, LLMs*

- **Achieved highly reliable, type-safe resume parsing** by architecting a full-stack TypeScript application utilizing OpenAI APIs and Zod schemas.
- **Optimized API performance and reliability** by engineering agentic workflows with integrated real-time job-search APIs, KV-backed rate limiting, and data caching.
- **Reduced the résumé-to-application timeline** from hours to seconds while operating strictly within free-tier API constraints.

Gaming Laptop Scraper and AI Recommender | *TypeScript, React, NoSQL*

- **Automated the extraction of live specifications** for over 1,000 gaming laptops by building a robust data pipeline using Puppeteer and NoSQL.
- **Maintained a 90% data extraction success rate** across major retailers (e.g., Lenovo, Canada Computers) by implementing dynamic scraping algorithms.
- **Reduced user search time by 70%** by developing a responsive Next.js/React front-end featuring an integrated AI recommendation chatbot.

Self-Driving Car Simulation | *Python, TensorFlow, OpenCV*

- **Achieved a 92% accuracy rate in environmental boundary detection** by engineering an autonomous driving simulation using Python, TensorFlow, and OpenCV to process real-time visual data.

Skills

Languages: TypeScript, JavaScript, Python, Dart, SQL
Frontend & Mobile: React, Next.js, Flutter, Bootstrap, Three.js (3js), Accessible UI/UX Design
Backend & Databases: Node.js, PostgreSQL (Supabase), NoSQL, REST APIs
AI, ML & Data: OpenAI API, LLMs, TensorFlow, OpenCV, Puppeteer, Zod (Schema Validation)
Core Competencies: Full-Stack Development, Agentic Workflows, Automated Data Pipelines, CLI Tooling

Education

Computer Programming & Analysis 09/2023 – Dec 2026
Seneca Polytechnic *Toronto, ON*
