Backend developer focused on API integration, CI/CD automation, and application security

Education

Seneca Polytechnic – Advanced Diploma, Computer Programming & Analysis — Sep 2023 – Aug 2026

Experience

Software Developer (Contract), Villen Technologies – Remote — Jun 2026 – Present

- Eliminated a URL injection path in rendered sources by hardening the API trust boundary with a dependency-free validation layer that normalizes malformed backend responses before render.
- Instrumented **Sentry** across 25 error paths, converting silently swallowed `catch` blocks into tagged, source-mapped events — the app's first production error visibility.
- Built **Playwright** verification scripts that drive the running app against a failing backend and report which of the 25 instrumented paths actually emit Sentry events, catching miswired instrumentation before an incident does.

Full Stack Developer (Freelance), Café Princess – Toronto, ON — Feb 2026 – Jun 2026

- Built a storefront in **React**, **TypeScript**, and **PostgreSQL (Supabase)** serving roughly **100 daily customers**.
- Built a privilege-separated **Supabase** admin portal so staff updated prices without shared credentials.
- Cut image payload roughly **90%** by converting assets to **WebP**, speeding page loads for mobile customers.

Mobile Application Developer (Freelance), Sunjin School – Gyeonggi-do, KR — Jun 2025 – Jul 2025

- Built a **Flutter** and **Dart** classroom app used by roughly **150 students** to simulate buying cinema tickets.
- Met teacher-specified **accessibility** requirements so students with disabilities could navigate independently.

Projects

Fragments Microservice | *Node.js, Express, AWS (Cognito, IAM, DynamoDB, S3), Docker* — Github

- Built a **Node.js** and **Express REST API** on **AWS** with **Amazon Cognito** auth, scoping reads and writes by owner.
- Applied **least-privilege IAM** roles for **S3** and **DynamoDB**, keeping credentials out of source control.
- Containerized with **Docker** and built a **GitHub Actions CI/CD** pipeline blocking failing builds from deploy.

JobMatch | *TypeScript, Next.js, Node.js, OpenAI API, Zod* — Demo

- Built a **Next.js** and **Node.js** resume parser on the **OpenAI API**, schema-validating output with **Zod**.
- Automated resume tailoring and matching to cut application time from **roughly 30 minutes to under a minute**.

SmartStock | *TypeScript, Next.js, Tailwind, Flask API, JWT* — Github

- Built a restaurant inventory app in a **4-person Agile team**, owning the **Next.js** and **Tailwind** frontend.
- Implemented **JWT role-based access control** and protected routes against a **Python Flask REST API**.

Gaming Laptop Recommender | *TypeScript, Next.js, Puppeteer, NoSQL* — Github

- Built a **Puppeteer** scraper collecting live specs for **1,000+ gaming laptops** into a **NoSQL** database.
- Kept roughly **90%** scrape success as retailer sites changed by using per-site configurations.

Leadership

Team Lead & Backend Engineer | *Seneca Hackathon ChopSuey* — Github

- Led a **5-person team**, scoping delivery phases and owning the **Node.js** backend, which resolved product origin from the **Open Food Facts API** with a templated **GPT** fallback.
