Summary

Full-stack developer graduating from college in Aug 2026, with experience across React/TypeScript, Node, and AWS. Shipped work for two paying clients and built cloud-native and AI-integrated tools end to end. Seeking a junior full-stack or backend role where I can contribute real work while learning from an experienced team.

Technical Experience

Software Developer (Contract), Villen Technologies – Remote — Jun 2026 – Present

- Helped design **backend scaling architecture** for an early-stage product.
- Drafted technical proposals for AI features using **structured prompts** to **enforce reliable, type-safe model output**.
- Contributed to the application's **security architecture**, documenting authentication and access-control approaches ahead of implementation.

Full Stack Developer (Freelance), Café Princess – Toronto, ON — Feb 2026 – Jun 2026

- Built the café's **customer-facing storefront** in React 18, TypeScript, and Tailwind, replacing printed menus.
- Built a **Supabase admin portal** with role-gated CRUD so staff could update menus without a developer.
- Added a **static fallback with single-flag failover** to keep the site reachable if the database goes down.
- Cut image payload **roughly 90%** with WebP conversion, keeping the site within the client's hosting budget.

Mobile Application Developer (Freelance), Sunjin School – Gyeonggi-do, KR — Jun 2025 – Jul 2025

- Built a **Flutter app** used in classrooms to teach students how to buy tickets, find seats, and navigate a cinema.
- Met **accessibility requirements** set by the school's special-education staff: large touch targets, screen-reader labels, reduced-motion options.

Projects

JobMatch | *TypeScript, Next.js, Node.js, OpenAI API, Zod*

- Parsed resumes into a **typed schema** with the OpenAI API and Zod, retrying on validation failure.
- Added **KV-backed rate limiting** and response caching to stay inside free-tier API quotas.
- Cut the resume-to-application flow from **roughly 30 minutes to under a minute**.

Fragments Microservice | *Node.js, Express, AWS (Cognito, DynamoDB, S3), Docker*

- Built a **cloud-native CRUD microservice** for text, JSON, and image fragments with content-type conversion.
- Enforced auth at the edge with **Amazon Cognito**; split metadata in **DynamoDB** from binary storage in S3.
- Containerized with **Docker** and automated build, test, and deploy through **GitHub Actions**.

SmartStock | *TypeScript, Next.js, Tailwind, Flask API, JWT*

- Collaborated in a **4-person Agile team**, dividing frontend/backend ownership and integrating through a shared API contract.
- Built the **Next.js frontend** for an inventory app, integrating a separate Flask REST API through a single typed fetch wrapper.
- Implemented **role-based access control** (Owner/Admin/Manager/Employee) with client-side route guards.
- Built **demand forecasting and alert** views, parsing model output defensively with a plausibility check before rendering.

Gaming Laptop Recommender | *TypeScript, Next.js, Puppeteer, NoSQL*

- Scraped live specs for **1,000+ gaming laptops** into NoSQL with a Puppeteer data pipeline.
- Held **roughly 90% extraction success** across Lenovo and Canada Computers via per-retailer selector configs.
- Built a **Next.js chat front end** recommending laptops from the dataset by budget and intended use.

Skills

Languages: TypeScript, JavaScript, Python, Dart, SQL
Frontend & Mobile: React, Next.js, Tailwind, Flutter, Bootstrap
Backend & Databases: Node.js, Express, REST APIs, PostgreSQL (Supabase), DynamoDB, NoSQL
Cloud & DevOps: AWS (Cognito, S3, DynamoDB), Docker, GitHub Actions, Vercel, Git
AI & Data: OpenAI API, TensorFlow, OpenCV, Puppeteer, Zod

Education

Advanced Diploma, Computer Programming & Analysis — Sep 2023 – Aug 2026
Seneca Polytechnic — *Toronto, ON*
