Education

Seneca Polytechnic – Advanced Diploma, Computer Programming & Analysis Sep 2023 – Aug 2026

Technical Experience

Software Developer (Contract), Villen Technologies – Remote Jun 2026 – Present

- Architected an AI validation gate that checks every model response against a strict Zod schema, automatically rejecting and retrying outputs with missing fields, invalid values, or hallucinated content so only complete, correctly structured answers reach users.
- Cut result-matching time from ∼3 min to ∼2 s (∼90x faster) by replacing a chain of rate-limited LLM calls with a semantic embedding matcher and rule-based checks that score every result in a single batched call.
- Hardened the backend by migrating 14 API routes to Firebase Cloud Functions, moving API keys out of application code into Secret Manager, and adding Redis-backed per-user and per-IP rate limits to block abusive traffic before it could overload the server.
- Closed a cross-site scripting (XSS) vulnerability in rendered source links by validating untrusted backend responses and rejecting non-HTTP(S) URLs, preventing malicious scripts from running in users' browsers.
- Gave the team real-time visibility into production failures by adding Sentry error monitoring and structured Pino logging across 12 route handlers, surfacing issues in an owner dashboard so bugs were caught before users reported them.

Freelance Software Developer – Toronto, ON & Gyeonggi-do, KR Jun 2025 – Jun 2026

- Built a privilege-separated Supabase (PostgreSQL) admin portal for a cafe so staff can update prices without contacting a developer.
- Built a customer-facing storefront for a cafe in React, TypeScript, and PostgreSQL serving roughly 1000 weekly customers.
- Built a Flutter classroom app used by roughly 150 students, meeting teacher-specified accessibility requirements for independent navigation.

Projects

Fragments Microservice | *Node.js, Express, AWS (Cognito, IAM, DynamoDB, S3), Docker* GitHub

- Built a Node.js and Express REST API on AWS with Amazon Cognito auth, scoping reads and writes by owner.
- Applied least-privilege IAM roles for S3 and DynamoDB, keeping credentials out of source control.
- Containerized with Docker and automated build, test, and deploy with a GitHub Actions CI/CD pipeline, gating deploys on passing tests to prevent broken releases.

JobMatch | *TypeScript, Next.js, Node.js, OpenAI API, Zod* Demo

- Integrated the OpenAI API with Zod-validated responses and automatic retry on invalid output, keeping malformed model data out of the app.
- Automated resume tailoring and matching to reduce processing time from roughly 30 to under a minute.

SmartStock | *TypeScript, Next.js, Tailwind, Flask API, JWT* GitHub

- Implemented JWT role-based access control with protected routes against a Python Flask REST API.
- Built the inventory app's Next.js and Tailwind frontend in a 4-person Agile team.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Dart, Bash
Frameworks: React, Next.js, Node.js, Express, Flask, Flutter, Tailwind, REST APIs
Cloud & DevOps: AWS (IAM, S3, Cognito), Firebase Cloud Functions, Docker, GitHub Actions, Vercel, Git
Databases: PostgreSQL, Supabase, DynamoDB, Redis
Observability & Testing: Sentry, Pino, Playwright, unit & integration testing
AI & Security: OpenAI API, embeddings, Zod validation, RBAC/JWT, XSS prevention, least-privilege IAM, secrets management
