Open Work Visa (PGWP) in Toronto, ON

Education

- Advanced Diploma, Computer Programming & Analysis, Seneca Polytechnic Aug 2026

Work History

Junior Software Developer (Contract), Villen Technologies - Remote *Jun 2026 - Oct 2026*

- Developed an AI job-matching service that analyzed resumes, identified relevant job listings, and explained how well candidates matched each position.
- Reduced resume processing and job-matching time from approximately 3 minutes to 3 seconds by replacing sequential LLM calls with embedding-based semantic search and rule-based checks.
- Improved LLM response reliability using Zod schema validation and automated retries to reject malformed outputs and handle recoverable API errors.
- Migrated 14 REST API routes from Vercel to Firebase Cloud Functions and automated testing and deployment through GitHub Actions to meet company infrastructure requirements.
- Secured backend APIs using Secret Manager and Redis rate limiting, to protect credentials, restrict excessive requests, and mitigate XSS vulnerabilities.
- Implemented production monitoring using Sentry and Pino structured logging across 12 API handlers to detect errors and support troubleshooting.

Freelance Software Developer - Toronto, ON & Gyeonggi-do, KR *Jun 2025 - Jun 2026*

- Developed web and mobile applications using React, TypeScript, PostgreSQL, and Flutter to support business operations and customer-facing workflows.
- Built a Supabase/PostgreSQL administrative portal with role-based access, enabling cafe staff to independently update product pricing without developer assistance.
- Delivered a React and TypeScript customer-facing storefront for a cafe serving approximately 1,000 customers weekly, supporting digital access to product information.
- Developed a Flutter classroom application used by approximately 150 students, implementing teacher-defined accessibility requirements to improve independent navigation.

Projects

Fragments Microservice | *Node.js, Express, AWS, Docker*

- Built a Node.js and Express REST API service on AWS that lets users sign in, save small pieces of data, and retrieve them later.
- Restricted API reads and writes to each authenticated owner and configured scoped IAM permissions for S3 and DynamoDB to limit access to stored data.
- Containerized the service with Docker and automated builds, tests, and deployment through GitHub Actions, requiring tests to pass before deployment

JobMatch | *TypeScript, Next.js, Node.js, OpenAI API, Zod*

- Built a TypeScript and Next.js application that helps users tailor resumes and assess job fit using the OpenAI API.
- Validated AI responses with Zod and automatically retried invalid outputs to reject malformed model data.
- Used the OpenAI API to automate resume tailoring and job matching, with processing times under one minute.

SmartStock | *TypeScript, Next.js, Tailwind, Flask, JWT*

- Built an inventory application in a four-person Agile team using Next.js, Tailwind, and a Python Flask REST API.
- Developed the inventory application's frontend with Next.js and Tailwind, integrating it with the Flask REST API.
- Implemented JWT-based role checks and protected application routes to restrict access according to user permissions.
